Timeline:

1. I am going to first sketch out my design on paper and write major codes to each section so I feel more organized. It will be easier for me to visualize and organize my website when it is written on a piece of paper.
2. I am then going to input all my codes / carousel
3. I am going to put my images in and resize my images if needed
4. I will then spend some time with styling my website. I will style it how I did in my wireframe but work from there to see if I like to it/ want to change anything
